

SYMBIOSIS INSTITUTE OF TECHNOLOGY, NAGPUR
Symbiosis International (Deemed University)

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category - I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

EXPERIMENT NO: 1

Title : Demonstrate inline, internal, and external JavaScript; use console methods; create a webpage showing user info and a welcome message.

2. Software/Tools Required: Visual Studio Code, Google Chrome, HTML5, CSS3, and JavaScript.

3. Theory: JavaScript is a scripting language used to make web pages interactive and dynamic. It can be added to an HTML document in three different ways:

1. Inline JavaScript:

Inline JavaScript is written directly inside an HTML element using event attributes such as `onclick`. In this experiment, it was used to perform an action directly when the user interacted with a webpage element.

2. Internal JavaScript:

Internal JavaScript is written inside the `<script>` tag within the same HTML file. In this experiment, JavaScript functions were defined internally and called when specific user interactions occurred on the webpage.

3. External JavaScript:

External JavaScript is written in a separate `.js` file and connected to the HTML document using the `<script src="..."></script>` tag. In this experiment, external JavaScript was used to keep the scripting code separate from the HTML structure.

4. OUTPUT :

Conclusion : Thus, a webpage was successfully created using HTML, CSS, and JavaScript. The three methods of integrating JavaScript inline, internal, and external were successfully implemented and demonstrated through different interactive features on the webpage.
